Maximum driving pleasure meets individual dynamics: the new MINI Cooper Electric (J01) by AC Schnitzer

AC Schnitzer gives the new MINI Cooper Electric (J01) an even sportier touch, setting new standards for electrified driving pleasure with individual style. With a specially developed performance package, the renowned tuner raises the dynamics and appearance of the electric cult car to a new level.

Optimized driving dynamics for more agility: the AC Schnitzer suspension spring kit ensures even more precise handling and sportier road holding by lowering the MINI by approx. 20 - 25 mm at the front axle and approx. 5 - 10 mm at the rear axle. The result: optimized road holding thanks to a lower centre of gravity and an even more direct driving experience.

If you want to continue using the standard wheels but still improve road holding, you can order additional aluminium wheel spacers from AC Schnitzer for the front and rear axles, increasing driving stability by 10 mm per side.

Road holding is further improved by the exclusive wheel and tyre combinations, which also create a striking appearance. Visually and dynamically, AC Schnitzer sets the standard with the AC1 Alloy Wheels in BiColor or Black in size 7.5J x 19" with 225/35 R 19 tyres. The combination ensures a perfect mix of sporting looks and optimum performance.

Aerodynamic highlights are set by an expressive design. The specially developed front splitter not only strengthens the sporty appearance, but also improves the output values at the front axle. The package is complemented by the striking rear roof wing, which makes a real visual statement. In addition, it ensures additional contact pressure at the rear axle thanks to the optimized air flow.

For an even more exclusive look, AC Schnitzer offers tailor-made design highlights: design stickers for the bonnet and decals in black or red underline the individual character of the vehicle. The AC Schnitzer rear skirt protective film, which extends over the entire loading sill between the rear lights, offers protection and is also a stylish addition.

With the AC Schnitzer tuning program, the MINI Cooper Electric (J01) is not only visually sharpened, but also upgraded in terms of driving dynamics and performance – for those looking for electric driving fun with an unmistakable character.
